

Business Problem Statement

The **Telecommunications service provider organization** offering internet, voice, digital services and other services to customers across multiple regions. In a highly competitive market with minimal switching barriers, **customer churn directly impacts revenue stability and customer lifetime value**.

Business stakeholders required a **centralized, interactive reporting solution** to monitor churn trends and uncover the key factors influencing customer attrition.

Business Problem

Although the company tracks customer numbers at a high level, it lacked a **self-service analytics solution** to answer critical business questions such as:

- Which **customer segments** are driving churn?
- How churn varies by **demographics, geography, tenure, and contract type**
- The influence of **services, internet type, and payment methods** on churn
- Identification of **early churn risk signals** across the customer lifecycle

Without a dynamic dashboard, insights were scattered across static reports, limiting timely decision-making.

Role & Responsibilities

your role was to design and deliver an **end-to-end analytical solution**, converting raw customer data into **business-ready insights** through robust data modeling and visualization.

Key responsibilities included:

- Translating business requirements into **KPIs and analytical dimensions**
- Designing a **clean data model** optimized for performance and scalability
- Creating **DAX measures** for churn rate, total churn, new joiners, and trend analysis
- Building an **interactive Power BI dashboard** with slicers and drill-downs for stakeholder exploration
- Ensuring visuals followed **best practices for readability, consistency, and executive reporting**

Dashboard Objectives

The Power BI dashboard was designed to:

- Track **Total Customers, New Joiners, Churn Rate, and Total Churn**
- Analyze churn across **Demographic, Geographic, Account, and Service dimensions**
- Identify **high-risk segments** based on age group, tenure, and contract type
- Compare churn behavior by **internet service, payment method, and add-on services**
- Enable **data-driven retention strategies** through interactive filtering
